

TECHNICAL SESSION

Ensuring inclusion and conflict sensitivity during recovery in contexts affected by fragility and conflict

May 14th , 2019/ 14:00 – 15:30 / Room 2

<p>Context</p>	<p>Recovery is a complex undertaking and it becomes even more challenging when it occurs in a context that is continuously affected by fragility and conflict. In such settings with an amalgamation of multi-dimensional risks, access to certain areas may be restricted and existing tensions between different social actors or groups can lead to a situation, where the overall planning process, the allocation of resources towards, and the implementation of recovery projects can become highly politicized. This may lead to criticism of legitimacy and undermine recovery efforts.</p> <p>Additionally, recovery interventions are often “discriminatory” by nature as they tend to focus on disaster- or conflict-affected populations, which excludes non-affected but equally destitute populations. The planning and implementation process may unintentionally create additional issues of social exclusion by promoting the needs of certain groups over others, which can lead to social cleavage and division. Therefore, identifying potential sources of conflict and adopting a conflict sensitive and inclusive approach when assessing needs as well as planning and implementing a post-crisis recovery strategy, ensures that the measures taken do no harm and help strengthen social cohesion and stability.</p> <p>This session will present experiences from different disaster- and conflict-related recovery processes and reflect on lessons learned with respect to integrating conflict sensitivity and ensuring social inclusion throughout a recovery process. The session will also highlight how integrating a conflict sensitive approach in the tools for assessment and recovery programming (e.g. Post-Disaster Needs Assessment, Disaster Recovery Framework, Recovery and Peacebuilding Assessment, Social Impact Analysis and Monitoring, etc.) and the combined use of these with conflict sensitivity tools (e.g. tools for analyzing the impact of assistance on peace and conflict dynamics) can be used to help recovery processes and avoid the creation or exacerbation of tensions and effectively address inclusion.</p>
