

The Digital Earth Partnership

Harnessing the new generation of Earth observation services for international development

A person with dark braids is seated at a table, looking at a laptop. The laptop screen shows a satellite map of a residential area with buildings and trees. On the table, there are two plastic water bottles, a pen, and some papers. In the background, there are red curtains and a window. Another person is partially visible in the background, leaning over a table.

Goal of the Digital Earth Partnership

Accelerate sustainable development through the adoption of digital Earth observation services

Objectives

- Enhance outcomes of service delivery across sectors
- Improve data services for spatial monitoring, decision support and risk management activities
- Create solutions that are locally appropriate, affordable, scalable and sustainable

WB-ESA Partnership Space in support of International Development Assistance

Building on over 10 years of
collaboration

Eight Principles for Program Design

Ensure demand driven

Aim for scale and sustainability

Cocreation and feedback

Promote ethics and protect the vulnerable

Build ecosystems of beneficiaries and providers

Address the digital and gender divides through inclusive skills, jobs, and opportunities

Support standards

Transparency and accountability

A background image showing two women wearing hijabs. One woman is wearing a black hijab and the other is wearing a blue hijab with a red pattern. They are both looking down at a smartphone held by the woman in the blue hijab. The woman in the black hijab is also holding a document. They appear to be outdoors, with some potted plants visible in the background.

Inclusion

Sustainable Jobs

Benefits of the Digital Earth Partnership

Stakeholder group	Benefit
Development Partner	Coordinated resource allocation. Better access and feedback from stakeholders. Increased transparency and accountability.
National Space Agencies	New service requirements, validation, and ground truth datasets leading to increased adoption and digital feedback loops.
Technical Institute / University	Access to local partnerships for data (labelling, validation, aggregation), and joint research and development.
National Beneficiary	Technical and financial resource mobilization for local digital services. Support for enabling environment
Regional Organizations	Enhanced capacity. Explore and validate opportunities for regional monitoring services.
Local Digital Communities	Access and skills to adopt new generation Earth observation services and develop new opportunities.

Open discussion: Guiding questions

Does the program proposal respond well to existing gap on access to EO data and services (culturally appropriate)?

Is the proposed co-creation approach the right one?

How can we build and expand on external partnerships? What are key areas for collaboration?

Other questions

Thank You!
