

Haiti – Resilient Water and Sanitation Systems

<u>Country</u>	Context and Objectives
Haiti	Haiti is highly vulnerable to the impact of natural hazards which generate high volatility and uncertainty in the national budget, destroy critical assets, and increase poverty. Haitian citizens and households bear the brunt of this impact, with vulnerable households being disproportionately affected.
EUReCa Component	
Mainstream Resilience	
Amount approved	The objective of this technical assistance is to enhance resilience in Haiti's water and sanitation sector.
€150,000 / \$173,000	
<u>Duration</u>	
06/2025 – 06/2027	

Main Activity and Expected Results

Enhancing resilience in Haiti's water and sanitation sector

This component offers technical assistance to water and sanitation sector stakeholders to better integrate disaster prevention, preparedness, and response measures into planning, infrastructure development, and service delivery. This is being conducted via a review of existing policies, capacity strengthening, and support for contingency planning.

Expected Results:

- Sector successfully adopts best practices.
- Climate change projections better integrated into risk reduction strategies.
- Communities prepared to respond to natural disasters.

Partnerships and Coordination

The activities under this technical assistance will support the implementation of the World Bank-financed <u>Decentralized Sustainable and Resilient Rural Water and Sanitation Project</u> (P178188).

The World Bank implements the grant in close coordination with the Direction Nationale de l'Eau Potable et de l'Assainissement (DINEPA) and the Office Regionale de l'Eau Potable (OREPA). All efforts are coordinated with the EU Delegation to Haiti.
