INTERNATIONAL FINANCING FOR DISASTER RISK MANAGEMENT

Disaster prevention and preparedness is a fraction of international aid

- Funding for natural disasters: 3.5% (US$106.7 billion)
- Emergency response: 65.5% (US$69.9 billion)
- Reconstruction & rehabilitation: 21.8% (US$23.3 billion)
- Disaster prevention & preparedness: 12.7% (US$13.5 billion)

Total international aid: US$3.03 trillion

Little improvement since the Hyogo Framework for Action (HFA) was endorsed

Source of disaster related financing is the Disaster Aid Tracking database (http://gfdrr.aiddata.org) unless otherwise noted and values are in Constant USD 2009. Category 'Disaster prevention and preparedness' includes flood control measures and 'Emergency response' may include non-natural disaster related aid components.
THE CHOICES WE MADE IN 2010

US$9.5 billion on peacekeeping
US$4.2 billion on food aid
US$2.6 billion Global Fund for TB, Malaria and AIDS
US$1.1 billion Disaster Prevention and Preparedness (2nd highest year on record)

TOP TEN RECEPIENTS OF DISASTER PREVENTION AND PREPAREDNESS, MOSTLY EMERGING ECONOMIES, ACCOUNT FOR 60% OF THE 20-YEAR TOTAL. THE REMAINING 155 COUNTRIES SHARE THE REST

China, Indonesia, Bangladesh, Philippines, Mexico, Colombia, Argentina, India, Brazil, Turkey

Disaster prevention and preparedness: 1
Emergency response: 2
Reconstruction and rehabilitation: 3

3. Emergency and Development Food Aid, taken from OECD DAC statistics.
PRIORITIES WE HAD OVER 20 YEARS

Multiple mortality risk % of GDP in at-risk areas

Country

Volume of Disaster prevention and preparedness funding in US$ millions

5. UNISDR Mortality Risk Index, 2009 (http://www.preventionweb.net/files/9929_MRIA3.pdf)
It is eight years into the implementation of the Hyogo Framework for Action for disaster risk reduction and two years to its likely renewal. Development partners are feverishly deliberating on setting the goals and priorities for a post-HFA framework and for integrating disaster risk considerations into the post-2015 Development Agenda. Irrespective of these discussions, natural disasters continue to devastate lives and livelihoods across the world and erode the development gains achieved over many decades of hard work.

At this crucial juncture, with all these decisions likely to shape how disaster risk is managed well into the future, now is the time to ask the question: how much has the international community contributed? Has it matched rhetoric with action? With growing consensus among the international community on investing more and better in disaster risk reduction, this is an opportune time to take an in-depth look into past and current commitments.

The report will feature:

- The most comprehensive picture of international financing for disaster risk management to date.
- An objective assessment of the trends emerging for financing of DRM and how it corresponds with key indicators of need and vulnerability.
- How financing for climate change adaptation is increasingly addressing disaster risk.
- Clear messages and a way forward for an exponential improvement in the way the international community reports and tracks investments in disaster risk reduction.

FINANCING DISASTER RISK MANAGEMENT: THE FORTHCOMING REPORT

It is eight years into the implementation of the Hyogo Framework for Action for disaster risk reduction and two years to its likely renewal. Development partners are feverishly deliberating on setting the goals and priorities for a post-HFA framework and for integrating disaster risk considerations into the post-2015 Development Agenda. Irrespective of these discussions, natural disasters continue to devastate lives and livelihoods across the world and erode the development gains achieved over many decades of hard work.

At this crucial juncture, with all these decisions likely to shape how disaster risk is managed well into the future, now is the time to ask the question: how much has the international community contributed? Has it matched rhetoric with action? With growing consensus among the international community on investing more and better in disaster risk reduction, this is an opportune time to take an in-depth look into past and current commitments.

This report, due to be released in the summer of 2013, will present a thorough review of natural disaster related financing using the Disaster Aid Tracking (DAT) database developed by the Global Facility for Disaster Reduction and Recovery on the AidData platform. This database, accessible at http://gfdrr.aiddata.org, is the most comprehensive attempt to identify natural disaster related financing within international humanitarian and development assistance.

The report will feature:

- The most comprehensive picture of international financing for disaster risk management to date.
- An objective assessment of the trends emerging for financing of DRM and how it corresponds with key indicators of need and vulnerability.
- How financing for climate change adaptation is increasingly addressing disaster risk.
- Clear messages and a way forward for an exponential improvement in the way the international community reports and tracks investments in disaster risk reduction.
